PROFESSIONAL SUMMARY

Full Stack Software Engineer with **2+ years of production experience** at a remote-first German VR/AI company, building Java/Kotlin Spring Boot microservices, REST APIs and customer-facing dashboards. Owned the end-to-end development of a new microservice with **15+ REST APIs serving 3,000+ customers**, led the decomposition of a monolith into microservices, and reduced media-upload latency by **80%** by moving storage to AWS S3. Equally comfortable on the frontend with React, Next.js and Angular, and experienced in shipping AI-powered product features from UI to API. Holds a B.Sc. in Computer Science and Engineering, has an IoT research paper accepted at an international conference, and a strong problem-solving foundation with 100+ LeetCode problems solved.

CORE COMPETENCIES

- REST API Design & Development
- Microservices Architecture
- Full Stack Web Applications
- Database Design & Migrations
- Cloud Storage (AWS S3)
- AI / LLM Feature Integration
- Authentication & RBAC
- Unit & Integration Testing
- Remote Team Collaboration

TECHNICAL SKILLS

Languages	Java, Kotlin, TypeScript, JavaScript, SQL, PHP, C
Backend	Spring Boot, Spring MVC, Spring Security, REST APIs, Microservices, JPA / Hibernate, Flyway, Spring Scheduler, Next.js API Routes
Frontend	React, Next.js (App Router), Angular, Tailwind CSS, Bootstrap, Zustand, Recharts, Framer Motion, HTML5, CSS3
Databases	MySQL, MariaDB; relational schema design, entity relationships, zero-downtime migrations
Cloud & DevOps	AWS S3, Azure, Docker, Git / GitHub, Vercel, Render
Security	JWT, Session-based Auth, OAuth, Role-Based Access Control, Token Verification
AI & Automation	LLM API integration (Groq, OpenRouter), prompt design, AI search & recommendations, scheduled jobs
Testing & Tools	JUnit 5, Mockito, Postman, IntelliJ IDEA, VS Code
Practices	MVC, Clean Code, Global Exception Handling, Request Validation, Agile / Remote Collaboration

PROFESSIONAL EXPERIENCE

Full Stack Software Engineer — **Aug 2024 – Present**

Avanto VR Solution GmbH, Germany — *Remote*

- Owned end-to-end development of a new standalone microservice, designing and delivering **15+ REST APIs** that power the company's iOS and Android apps for **3,000+ customers**.
- Decomposed a legacy monolithic backend into microservices, improving scalability, fault isolation and reliability under production-scale traffic.
- Reduced media-upload latency by **80%** (from ~1 minute to 5–10 seconds) by migrating file storage from local disk to **Amazon S3**.
- Built services following the MVC pattern with Hibernate and **Flyway**, enabling zero-downtime database schema migrations in production.

- Engineered customer routing and real-time location heartbeat features end to end for live tracking and system monitoring.
- Automated asynchronous data processing and scheduled maintenance tasks with **Spring Scheduler** background jobs.
- Collaborated with the team lead on REST API design and architecture decisions in a fully distributed remote team.

Key product work

- **ESYSYNC Dashboard** — designed and built the customer dashboard in Angular for 3,000+ customers, with real-time monitoring and a redesigned, more usable interface.
- **FEELESTATE** — developed an AI-powered interior design feature end to end, from the frontend experience to the backend APIs that drive it.

Environment: Kotlin, Java, Spring Boot, Hibernate, Flyway, MySQL / MariaDB, AWS S3, Angular, Docker, Azure, Git

PROJECTS

ShopSpot — AI-powered E-commerce Platform | *Spring Boot, React, MySQL, JWT, Docker* GitHub | Live Demo

A complete full-stack e-commerce application with product management, cart, secure checkout and order management.

- AI chatbot for customer assistance and product-related questions.
- AI-powered search, suggested collections and personalized recommendations based on wishlist, search and purchase history.
- AI image search: upload a photo to find visually similar products.
- Review sentiment analysis, stock analysis and automated low-inventory alerts.
- Secured APIs with JWT authentication, stateless sessions and role-based access control.

Alumni Association Management Platform | *Next.js, React, TypeScript, Tailwind CSS* GitHub | Live Demo

A full-stack platform for managing an alumni association, built with the Next.js App Router (Server/Client Components).

- Complete admin workflow: registration approval, notice CRUD and gallery management.
- REST API routes with server-side validation, cookie-based session auth and role-based route protection.
- Token-based QR code verification for alumni profiles, avoiding exposure of internal record IDs.
- Data-layer abstraction mirroring an ORM query interface, so a planned PostgreSQL migration needs no changes to consuming code.

ProLens — Real Estate Platform | *React, TypeScript, Vite, Tailwind CSS* GitHub | Live Demo

A modern property-intelligence frontend for discovering, filtering and comparing listings.

- Searchable, filterable property listings with interactive map exploration via React-Leaflet.
- Property comparison and market-insight dashboards built with Recharts.
- Global state management with Zustand; smooth transitions and micro-interactions with Framer Motion.
- Type-safe, responsive UI bundled with Vite and deployed on Vercel.

Student Result Management System | *Java, Spring Boot, JPA, MySQL, JUnit* GitHub

- Designed the relational MySQL schema, entity relationships and Spring Data JPA repositories with custom queries.
- Automated semester result and GPA calculation, with validation against duplicate or inconsistent grades.
- Unit and integration tests with JUnit 5 and Mockito; centralized exception handling via @ControllerAdvice.

E-commerce Backend REST Service | *Java, Spring Boot, Hibernate, MySQL* GitHub

- Product catalog APIs with pagination, multi-attribute sorting and search filtering.
- JPA/Hibernate entity mappings with strict bean validation on every request.
- Custom exception classes and @ControllerAdvice for clear, consistent API error responses.

Other Projects

Global Exception Handling	Centralized Spring Boot error handling with structured, standardized error responses.	GitHub
Spring Boot JWT Security	Authentication and authorization with Spring Security and JSON Web Tokens.	GitHub
Springular CRUD App	Full-stack CRUD application with an Angular frontend and Spring Boot backend.	GitHub
Angular + PHP CRUD	Full-stack CRUD with Angular, PHP REST-style APIs and MySQL.	GitHub
Webpage Screenshot Service	Spring Boot application that captures screenshots of web pages.	GitHub
Game Hub	React app for browsing and exploring video games.	GitHub
Memory Management Techniques	Java implementation of operating-system memory management techniques.	GitHub
Sudoku Solver	Sudoku puzzle solver written in Java.	GitHub

RESEARCH & PUBLICATION

PaniCord: An IoT-Based Emergency Alert System Using ESP32 for Real-Time Location Tracking Certificate

Accepted and presented at **ECCT 2026** — International Conference on Electrical, Computer & Telecommunication Engineering, Dhaka International University. An ESP32-based device that sends emergency alerts with real-time location tracking.

EDUCATION

Bachelor of Science in Computer Science and Engineering **August 2026**

Dhaka International University *Dhaka, Bangladesh*

ACHIEVEMENTS

- **100+ problems solved on LeetCode**, plus regular HackerRank practice in data structures and algorithms.
- **40+ public repositories on GitHub**, covering Spring Boot, React, Angular and Next.js work.
- Research paper accepted and presented at an international conference (ECCT 2026).
- Delivered production features used by **3,000+ customers** while completing a B.Sc. degree.
